

Head Engineer

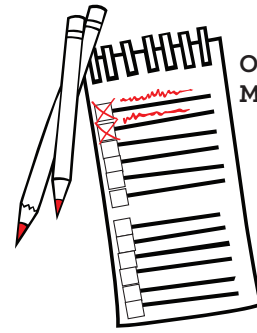

Your job is to look after all the other team leaders and make sure they are performing their jobs. If one of your managers isn't doing his or her job then the whole team will not reach their full potential!

Supply Manager

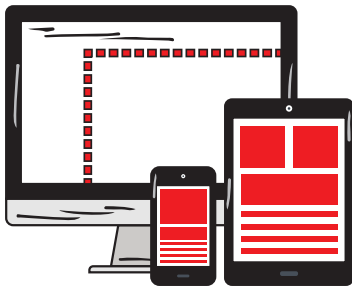

Your job is to make sure that everybody has what they need to do their job effectively. This includes everything from pencils and notebooks to materials for creating prototypes.

Operations Manager

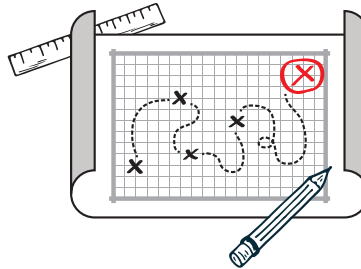

Your job is to make sure everybody in the group is on task. Make sure you don't have any slackers! People who sit back and don't contribute hold back the whole team. If a person doesn't know an answer, that is okay, but make sure everyone puts in an effort!

Communications Director

Your job is to communicate any problems or questions to the teacher. You must also make sure students are communicating with each other and following rules that were established for how your group will collaborate.

Quality Control Engineer

Your job is to make sure the group sticks to the plan. If they change the plan, that is okay, but it is your job to make sure they stay on track doing what they said they would do.
